Notes to Schedule 8

- (A) Revenues and expenses were allocated using FCC Part 36 separation rules. Allocation factors are based on 2000 traffic measurements per Separations Freeze Order (i.e. allocations for 2011 are based on the 2000 traffic measurement) which are the most current factors available.
- (B) Authorized by Montana Public Commission, Docket 6522, Order Number 4409.

Note: Rate Base Components are calculated using an average of beginning and end of year balances.

(A) This information is not available on an individual basis. Information regarding the pension plan is summarized in the attached copy of Footnote 8 of CenturyLink, Inc. 2011 Form 10-K.

(8) Employee Benefits

Pension, Post-Retirement and Other Post-Employment Benefits

We sponsor several defined benefit pension plans, which in the aggregate cover a substantial portion of our employees including separate plans for Legacy CenturyLink, Legacy Qwest and Embarq employees. Until such time as we elect to integrate the Qwest and Embarq benefit plans with ours, we plan to continue to operate these plans independently. Pension benefits for participants of these plans who are represented by a collective bargaining agreement are based on negotiated schedules. All other participants' pension benefits are based on each individual participant's years of service and compensation. We use a December 31 measurement date for all our plans. In addition to these tax qualified pension plans, we also maintain non-qualified pension plans for certain former highly compensated employees. We maintain post-retirement benefit plans that provide health care and life insurance benefits for certain eligible retirees. We also provide other post-employment benefits for eligible former employees.

Pension

In connection with the acquisition of Qwest on April 1, 2011, we assumed defined benefit pension plans sponsored by Qwest for its employees. Based on a valuation analysis, we recognized a \$490 million net liability at April 1, 2011 for the unfunded status of the Qwest pension plans, reflecting projected benefit obligations of \$8.3 billion in excess of the \$7.8 billion fair value of plan assets.

Current funding laws require a company with a plan shortfall to fund the annual cost of benefits earned in addition to a seven-year amortization of the shortfall. Our funding policy for the pension planis to make contributions with the objective of accumulating sufficient assets to pay all qualified pension benefits when due under the terms of the plan. The excounting unfunded status of our qualified pension plans was \$1.7 billion as of December 31, 2011. We expect to make a contribution of less than \$50 million in 2012, based on current laws and circumstances.

In 2010, to align our benefit structure closer to those offered by our competitors, we froze our Legacy CenturyLink and Embarq pension benefit accruals for our non-represented employees at December 31, 2010. Such action resulted in a reduction of our benefit obligation of approximately \$110 million and resulted in the recognition of a curtailment gain of approximately \$21 million in 2010.

e of Contents

Prior to their acquisition on April 1, 2011, Qwest had frozen its pension benefit accruals for non-represented employees.

Other Post-Retirement Benefits

Our post-retirement health care plans provide post-retirement benefits to qualified retirees. The post-retirement health care plans we assumed as part of our acquisitions of Qwest and Embarq provide post-retirement benefits to qualified retirees and allows (i) eligible employees retiring before certain dates to receive benefits at no or reduced cost and (ii) eligible employees retiring after certain dates to receive benefits on ashared cost basis. The post-retirement health care plans are generally funded by us and we expect to continue funding these post-retirement obligations as benefits are paid. Our plan uses a December 31 measurement date.

In connection with the acquisition of Qwest on April 1, 2011, we assumed post-retirement benefit plans sponsored by Qwest for certain of its employees. At April 1, 2011, we recognized a \$2.5 billion liability for the unfunded status of Qwest's post-retirement benefit plans, reflecting estimated accumulated post-retirement benefit obligations of \$3.3 billion in excess of the \$768 million fair value of the plan assets.

No contributions were made to the post-retirement trusts in 2011 or 2010 and we do not expect to make a contribution in 2012.

A change of 100 basis points in the assumed initial health care cost trend rate would have had the following effects in 2011:

100 Basis Points Change

(Decrease)
(Dollars in millions)

Effect on the aggregate of the service and interest cost components of net periodic post-retirement benefit expense (statements of operations)

\$\sqrt{2} = \frac{2}{2} = \frac{2}{2}\$

Effect on benefit obligation (balance sheets)

0 (65)

We expect our health care cost trend rate to decrease by 0.5% per year from 7.5% in 2012 to an ultimate rate of 5.0% in 2018. Our post-retirement health care ...pense, for certain eligible Legacy Qwest retirees and certain eligible Legacy CenturyLink retirees, is capped at a set dollar amount. Therefore, those health care benefit obligations are not subject to increasing health care trends after the effective date of the caps.

Expected Cash Flows

The pension, non-qualified pension and post-retirement health care benefit payments and premiums and life insurancepremium payments are paid by us or distributed from plan assets. The

e of Contents

estimated benefit payments provided below are based on actuarial assumptions using the demographics of the employee and retiree populations and have been reduced by estimated participant contributions.

Net Periodic Benefit Expense

The measurement date used to determine pension, non-qualified pension and post-retirement health care and life insurance benefits is December 31. The actuarial assumptions used to compute the net periodic benefit expense for our pension, non-qualified pension and post-retirement benefit plans are based upon information available as of the beginning of theyear, as presented in the following table.

		Pension Plans		Pos	t-Retirement Benefit Pl	ans
	2011 ⁽¹⁾	2010	2009	2011 ⁽²⁾	2010	2009

N/A-Not applicable

- This column does not consider Qwest's actuarial assumptions for its pension plan as of the beginning of the year due to the acquisition date of April 1, 2011. Qwest had the following actuarial assumptions as of April 1, 2011: discount rate of 5.40%; expected long-term rate of return on plan assets 7.50%; and a rate of compensation increase of 3.50%.
- (2)
 This column does not consider Qwest's actuarial assumptions for its post-retirement benefit plan as of the beginning of the year due to the acquisition date of April 1, 2011. Qwest had the following actuarial assumptions as of April 1, 2011: discount rate of 5.30%; expected long-term rate of return on plan assets of 7.50%; initial health care cost trend rate of 7.50% and ultimate health care trend rate of 5.00% to be reached in 2016.

e of Contents

Net periodic pension expense, which includes the effectsof the Qwest acquisition subsequent to April 1, 2011 and the Embarq acquisition subsequent to July 1, 2009, included the following components:

⁽¹⁾ Includes \$58 million of income related to the Qwest plans subsequent to the April 1, 2011 acquisition date.

(2)
The Legacy Embarq pension plan contains a provision that grants early retirement benefits for certain participants affected by workforce reductions. During 2009, we recognized approximately \$15 million of additional pension expense related to these contractual benefits.

Net periodic post-retirement benefit expense, which includes the effects of the Qwest acquisition subsequent to April 1, 2011 and the Embarq acquisition subsequent to July 1, 2009, included the following components:

Our aggregate accumulated benefit obligation as of December 31, 2011, 2010 and 2009 was \$17.499 billion, \$4.509 billion and \$4.042 billion, respectively.

Plan Assets

We maintain plan assets for our pension plans and certain post-retirement benefit plans. The pension plan assets are used for the payment of pension benefits and ain eligible plan expenses. The post-retirement benefit plan assets are used to pay health care benefits and premiums on behalf of eligible retirees who are former control-represented plan participants and to pay certain eligible plan expenses. The expected rate of return on plan assets is the long-term rate of return we expect to earn on the plans' assets. The rate of return is determined by the strategic allocation of plan assets and the long-term risk and return forecast for each asset class. The forecasts for each asset class are generated primarily from an analysis of the long-term expectations of various third party investment management organizations. The expected rate of return on plan assets is reviewed annually and revised, as necessary, to reflect changes in the financial markets and our investment strategy. The following table summarizes the change in the fair value of plan assets for the pension and post-retirement benefit plans:

		Pension Plans Years Ended December 31,

Pension Plans: Our investment objective for the pension planassets is to achieve an attractive risk-adjusted return over time that will provide for the payment of benefits and minimize the risk of large losses. Our pension plan investment strategy is designed to meet this objective by broadly diversifying plan assets across numerous strategies with differing expected returns, volatilities and correlations. The pension plan assets have target allocations of 53% to interest rate sensitive investments and 47% to investments designed to provide higher expected returns than the interest rate sensitive investments. Interest rate sensitive investments include 32% of plan assets targeted primarily to long-duration investment grade bonds, 10% to high yield and emerging market bonds, 5% to convertible bonds and 6% targeted to diversified strategies, which primarily have exposures to global government, corporate and inflation-linked bonds, as well as some exposures to global stocks and commodities. Assets expected to provide higher returns than the interest rate sensitive assets include broadly diversified equity investments with approximately 15% targeted to U.S. stocks, 12% to developed market non-U.S. stocks and 3% to emerging market stocks. Approximately 12% is allocated to other private markets investments including funds primarily invested in private equity, debt and heee funds. Real estate investments are targeted at 5% of plan assets. At the beginning of 2012, our expected annual long-term rate of return on pension assets is assumed to be 7.5%.

Post-Retirement Benefit Plans: Our investment objective for the post-retirement benefit plan assets is to achieve an attractive risk-adjusted return and minimize the risk of large losses over the expected life of the assets. Investment risk is managed by broadly diversifying assets across numerous strategies with differing acted returns, volatilities and correlations. Our investment strategy is designed to be consistent with theinvestment objective, with particular focus on providing activities and 65% to non-equity investments are provided employees post-retirement health care costs. The post-retirement benefit plan assets have target allocations of 35% to equities and 65% to non-equity investments. Specific target allocations within these broad categories are allowed to vary to provide liquidity in order to meet reimbursement requirements. Equity investments are broadly diversified with exposure to publicly traded U.S., non-U.S. and emerging market stocks and private equity. While no new private equity investments have been made in recent years, the percent allocation to existing private equity investments is expected to increase in the near term as liquid, publicly traded stocks are drawn down for the reimbursement of health care costs. The 65% non-equity allocation includes investment grade bonds, high yield bonds, convertible bonds, emerging market debt, real estate, hedge funds, private debt and diversified strategies. At the beginning of 2012, our expected annual long-term rate of return on post-retirement benefit plan assets is assumed to be 7.5%

Permitted investments: Plan assets are managed consistent with the restrictions set forth by the Employee Retirement Income Security Act of 1974, as amended, which requires diversification of assets and also generally prohibts defined benefit and welfare plans from investing more than 10% of their

le of Contents

assets in securities issued by the sponsor company. At December 31, 2011, the pension and post-retirement benefit plans did not directly own any shares of our common stock or any of our debt, which is consistent with December 31, 2010.

Derivative instruments: Derivative instruments are used to reduce risk as well as provide return. The pension and post-retirement benefit plans use exchange traded futures to gain exposure to equity and Treasurymarkets consistent with target asset allocations. Interest rate swaps are used in the pension plan to reduce risk relative to measurement of the benefit obligation, which is sensitive to interest rate changes. Foreign exchange forward contracts and total return swaps are used primarily to manage currency exposures. Credit default swaps are used to manage credit risk exposures in a cost effective and targeted manner relative to transacting with physical corporate fixed income securities. Options are currently used to manage interest rate exposure taking into account the implied volatility and current pricing of the specific underlying market instrument. Some derivative instruments subject the plans to counterparty risk. We closely monitor counterparty exposure and mitigate this risk by diversifying the exposure among multiple high credit quality counterparties, requiring collateral and limiting exposure by periodically settling contracts.

The gross notional exposure of the derivative instruments directly held by the plans is shown below. The notional amount of the derivatives corresponds to market exposure but does not represent an actual cash investment.

	Gross notiona	l exposure

Fair Value Measurements: Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between independent and knowledgeable parties who are willing and able to transact for an asset or liability at the measurement date. We use valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs when determining fair value and then we rank the estimated values based on the reliability of the inputs used following the fair value hierarchy set forth by the FASB. For additional information on the fair value hierarchy, see Note 11—Fair Value Disclosure.

At December 31, 2011, we used the following valuation techniques to measure fair value for assets. There were no changes to these methodologies during 2011:

Level 1—Assets were valued using the closing price reported in the active market in which the individual security was traded.

ie of Contents

Level 2—Assets were valued using quoted prices in markets that are not active, broker dealer quotations, net asset value of shares held by the plansand other methods by which all significant input were observable at the measurement date.

Level 3—Assets were valued using unobservable inputs in which little or no market data exists as reported by the respective institutions at the measurement date.

The tables below presents the fair value of plan assets by category and the input levels used to determine those fair values at December 31, 2011. It is important to note that the asset allocations do not include market exposures that are gained with derivatives.

The plans' assets are invested in various asset categories utilizing multiple strategies and investment managers. For several of the investments in the tables above and discussed below, the plans own units in commingled funds and limited partnerships that invest in various types of assets. Interests in commingled funds are valued using the net asset value (NAV) perunit of each fund. The NAV reported by the fund manager is based on the market value of the underlying investments owned by each fund, minus its liabilities, divided by the number of shares outstanding. Commingled funds held by the plans that can be redeemed at NAV within a year of the financial statement date are generally classified as Level 2. Investments in limited partnerships represent long-term commitments with a fixed maturity date, typically ten years. Valuation inputs for these limited partnership interests are generally based on assumptions and other information not observable in he market and are classified as Level 3 investments. The assumptions and valuation methodologies of the pricing vendors, account managers, fund managers and partnerships are monitored and evaluated for reasonableness. Below is an overview of the asset categories, the underlying strategies and valuation inputs used b value the assets in the preceding tables:

- (a) Investment grade bonds represent investments in fixed income securities as well as commingled bond funds with characteristics similar to the Barclays Capital U.S. Aggregate Bond Index. This index is comprised of U.S. Treasury securities, agencies, corporate bonds, mortgage-backed securities, asset-backed securities and commercial mortgage-backed securities. Treasury securities are valued at the bid price reported in the active market in which the security is traded and are classified as Level 1. The valuation inputs of other investment grade bonds primarily utilize observable market information and are based on a spread to U.S. Treasury securities and consider yields available on comparable securities of issuers with similar credit ratings. The primary observable inputs include references to the new issue marketfor similar securities, the secondary trading markets and dealer quotes. Option adjusted spread models are utilized to evaluate securities such as asset backed securities that have early redemption features. These securities are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying fixed income securities using the same valuation inputs described above. The commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.
- (b) High yield bonds represent investments in below investment grade fixed income securities as well as commingled high yield bond funds. The valuation inputs for the securities primarily utilize observable market information and are based on a spread to U.S. Treasury securities and consider yields available on comparable securities of issuers with similar credit ratings. These securities are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying high yield instruments using the same valuation inputs described above. Commingled funds that can be redeemed at NAV within a year of the financial statement date are classified as Level 2. Commingled funds that cannot be redeemed at NAV or that cannot be redeemed at NAV within a year of the financial statement date are classified as Level 3.

le of Contents

- (c) Emerging market bonds represent investments in securities issued by governments and other entities located in developing countries as well as commingled emerging market bond funds. The valuation inputs for the securities utilize observable market information and are primarily based on dealer quotes or a spread relative to the local government bonds. These securities are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying emerging market bonds using the same valuation inputs described above. The commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.
- (d) Convertible bonds primarily represent investments in corporate debt securities that have features that allow the debt to be converted into equity securities under certain circumstances. The valuation inputs for the individual convertible bonds primarily utilize observable market information including a spread to U.S. Treasuries and the value and volatility of the underlying equity security. Convertible bonds are classified as Level 2.
- (e) Diversified strategies represent an investment in a commingled fund that primarily has exposures to global government, corporate and inflation linked bonds, global stocks and commodities. The commingled fund is valued at NAV based on the market value of the underlying investments. The valuation inputs utilize observable market information including published prices for exchange traded securities bid prices for government bonds, and spreads and yields available for comparable fixed income securities with similar credit ratings. This fund can be redeemed at NAV within a year of the financial statement date and is classified as Level 2.
- (f) U.S. stocks represent investments in stocks of U.S. based companies as well as commingled U.S. stock funds. The valuation inputs for U.S. stocks are based on the last published price reported on the major stock market on which the securities are traded and are classified as Level 1. The commingled funds are valued at NAV based on the market value of the inderlying investments using the same valuation inputs described above. These commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.
- (g) Non-U.S. stocks represent investments in stocks of companies based in developed countries outside the U.S. as well as commingled funds. The valuation inputs for non-U.S. stocks are based on the last published price reported on the major stock market on which the securities are traded and are classified as Level 1. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described above. These commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.
- (h) Emerging market stocks represent investments in a registered mutual fund and commingled funds comprised of stocks of companies located in developing markets. Registered mutual funds are valued at the last published price reported on the major market on which the mutual funds are traded and are classified as Level 1. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described previously for individual stocks. These commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.
- (i) Private equity represents non-public investments in domestic and foreign buy out and venture capital funds. Private equity funds are structured as limited partnerships and are valued according to the valuation policy of each partnership, subject to prevailing accounting and other regulatoryguidelines. The partnerships use valuation methodologies that give consideration to arange of factors, including but not limited to the price at which investments were acquired, the nature of the investments, market conditions, trading values on comparable public securities, current and projected operating performance, and financing transactions subsequent to the

ie of Contents

acquisition of the investments. These valuation methodologies involve a significant degree of judgment. Private equity investments are classified as Level 3.

- (j) Private debt represents non-public investments in distressed or mezzanine debt funds. Mezzanine debt instruments are debt instruments that are subordinated to other debtissues and may include embedded equity instruments such as warrants. Private debt funds are structured as limited partnerships and are valued according to the valuation policy of eachpartnership, subject to prevailing accounting and other regulatory guidelines. The valuation of underlying fund investments are based on factors including the issuer's current and projected credit worthiness, the security's terms, reference to the securities of comparable companies, and other market factors. These valuation methodologies involve a significant degree of judgment. Private debt investments are classified as Level 3.
- (k) Market neutral hedge funds hold investments in a diversified mix of instruments that are intended in combination to exhibit lowcorrelations to market fluctuations. These investments are typically combined with futures to achieve uncorrelated excess returns over various markets. Directional hedge funds—This asset category represents investments that may exhibit somewhat higher correlations to market fluctuations than the market neutral hedge funds. Investments in hedge funds include both directinvestments and investments in diversified funds of funds. Hedge Funds are valued at NAV based on the market value of the underlying investments which include publicly traded equity and fixed income securities and privately negotiated debt securities. The hedge funds are valued by third party administrators using the same valuation inputs previously described. Hedge funds that can be redeemed at NAV within a year of the financial statement date are classified as Level 2. Hedge fund investments that cannot be redeemed at NAV or that cannot be redeemed at NAV within a year of the financial statement date are classified as Level 3.
- (I) Real estate represents investments in commingled funds and limited partnerships that invest in a diversified portfolio of real estate properties. These investments are valued at NAV according to the valuation policy of each fund or partnership, subject to prevailing accounting and other regulatory guidelines. The valuation inputs of the underlying properties are generally based on third-party appraisals that use comparable sales or a projection of future cash flows to determine fair value. Real estate investments that can be redeemed at NAV within a year of the financial statement date are classified as Level 2. Real estate investments that cannot be redeemed at NAV within a year of the financial statement date are classified as Level 3.
- (m) Derivatives include the market value of exchange traded futures contacts which are classified as Level 1, as well as privately negotiated over-the-counter swaps that are valued based on the change in interest rates or a specific market index and classified as Level 2. The market values represent gains or losses that occur due to fluctuations in interest rates, foreign currency exchange rates, security prices, or other factors.
- (n) Cash equivalents and short-term investments represent investments that are used in conjunction with derivatives positions or are used to provide liquidity for the payment of benefits or other purposes. U.S. Treasury Bills are valued at the bid price reported in the active market in whichthe security is traded and are classified as Level 1. The valuation inputs of other securities are based on a spread to U.S. Treasury Bills, the Federal Funds Rate, or London Interbank Offered Rate and consider yields available on comparable securities of issuers with similar credit ratings and are classified as Level 2. The commingled funds are valued at NAV based on the market value of the underlying investments using the same valuation inputs described above. These commingled funds can be redeemed at NAV within a year of the financial statement date and are classified as Level 2.

Table of Contents

(o) Other represents investment in private debt, high yield bonds and net payables and receivables associated with the securities. The valuation of underlying fund investments are based on factors including the issuer's current and projected credit worthiness, the security's terms, reference to the securities of comparable companies, and other market factors. These valuation methodologies involve a significant degree of judgment. These investments are classified as Level 3.

Concentrations of Risk: Investments, in general, are exposed tovarious risks, such as significant world events, interest rate, credit, foreign currency and overall market volatility risk. These risks are managed by broadly diversifying assets across numerous asset classes and strategies with differing expected returns, volatilities and correlations. Risk is also broadly diversified across numerous market sectors and individual companies. Financial instruments that potentially subject the plans to concentrations of counterparty risk consist principally of investment contracts with high quality financial institutions. These investment contracts are typically collateralized obligations and/or are actively managed, limiting the amount of counterparty exposure to any one financial institution. Although the investments are well diversified, the value of plan assets could change materially depending upon the overall market volatility, which could affect the funded status of the plans.

#HActual return on plan assets:							
Gains relating to assets sold during the year		33	1		. 34		
(Losses) gains relating to assets still held at year-end		(28) H			(27)		
Balance at December 31, 2011	\$	60	8	26	94		
(Losses) gains relating to assets still held at year-end	\$	十二年(28) 60	8	26	94		

Certain gains and losses are allocated between assets sold during the year and assets still held at year-end based on transactions and changes in valuations that occurred during the year. These allocations also impact our calculation of net acquisitions and dispositions.

At December 31, 2011, the investment program produced actual gains on pension and post-retirement plan assets of \$483 million as compared to the expected returns of \$750 million for a difference of \$267 million. As of December 31, 2010, the investment program produced actual gains on pension and post-retirement plan assets of \$489 million as compared to the expected returns of \$287 million for a difference of \$202 million. The short-term annual returns on plan assets will almost always be different from the expected long-term returns and the plans could experience net gains or losses, due primarily to the volatility occurring in the financial markets during any given year.

Unfunded Status

The following table presents the unfunded status of the pensions and post-retirement benefit plans:

	Pension P	lans	Post-Retirement Benefit Plans		
*	Years Ended De	cember 31,	Years Ended December 31,

Medicare Prescription Drug, Improvement and Modernization Act of 2003

We sponsor post-retirement health care plans with several benefit options that provide prescription drug benefits that we deem actuarially equivalent to or ding Medicare Part D. We recognize the impact of the federal subsidy received under the Medicare Prescription Drug, Improvement and Modernization Act of in the calculation of our post-retirement benefit obligation and net periodic post-retirement benefit expense.

Other Benefit Plans

Health Care and Life Insurance

We provide health care and life insurance benefits to essentially all of our active employees. We are largely self-funded for the cost of the health care plan. Our health care benefit expenses for current employees were \$377 million, \$190 million and \$67 million for the years ended December 31, 2011, 2010 and 2009, respectively. Union-represented employee benefits are based on negotiated collective bargaining agreements. Employees are required to partially fund the health care benefits provided by us, in addition to paying their own out-of-pocket costs. Participating non-represented employees contributed \$62 million, \$30 million and \$9 million December 31, 2011, 2010 and 2009, respectively. Participating union-represented employees contributed \$28 million, \$17 million and \$4 million for the years ended December 31, 2011, 2010 and 2009, respectively. Our group life insurance plans are fully insured and the premiums are paid by us.

401(k) Plan

We sponsor a qualified defined contribution benefitplan covering substantially all of our employees. Under this plan, employees may contribute a percentage of their annual compensation to the plan up to certain maximums, as defined by the plan and by the Internal Revenue Service ("IRS"). Currently, we match a percentage of employee contributions in cash. At December 31, 2011 and December 31, 2010, the assets of the plan included approximately 9 million and 4 million shares of our common stock, respectively, as a result of the combination of previous employer match and participant directed contributions. We recognized expenses related to this plan of \$70 million, \$17 million and \$14 million for the years ended December 31, 2011, 2010 and 2009, respectively.

Deferred Compensation Plans

We sponsored non-qualified unfunded deferred compensation plans for various groups that included certain of our current and former highly compensated employees. Participants in these plans could, at their discretion, invest their deferred compensation in various investment choices including our common stock. The value of assets and liabilities related to these plans was not significant.

(9) Share-based Compensation

We maintain programs that allow our Board of Directors (through its Compensation Committee or our Chief Executive Officer as its delegate) to grant incentives retain employees and our outside directors in any one or a combination of several forms, including incentive and non-qualified stock options; stock appreciation and the stock awards; restricted stock units and market and performance shares. Stock options generally expire ten years from the date of grant. We also offer an ESPP which allows eligible employees to purchase our common stock at a 15% discount based on the lower of the beginning or ending stock price during recurring six month offering periods.
